

# Your Name

## WEB-215 Project 01

Start with a heading for your name, a subheading for the project name, and a paragraph answering the rest of this stuff. Please state your experience with HTML and CSS. Have you already created a website (or a few)? How did you do in WEB-115? Have you taken WEB-210, and if so, how did you do? Are you confident in your coding skills? Can you write semantic code? Can you write valid code? How do you know it's semantically correct? How do you know it's valid? Recreate the nested list (with your own title) and the table. Then use CSS to format your page. Make sure your code is neat, semantic, and valid!

### Create a heading for this list:

- Layers of a web document
  1. Content
  2. Presentation
  3. Behavior
- Layer technologies
  1. HTML
  2. CSS
  3. JavaScript

Separation of Concerns		
Layer 1	Layer 2	Layer 3
Content	Presentation	Behavior
structure	visual formatting	interactivity
HTML	CSS	JavaScript
